

CHICAGO STREET MEDICINE

Medication Assisted Detoxification in the Emergency Department (MAD-ED): A Policy Proposal for Safety Net Hospitals

What is the issue?

There is currently no protocol for initiating Medication-Assisted Detox in the Emergency Department (MAD-ED) in safety-net hospitals in Chicago

Why is this is an issue?

Patients suffering from opioid-use disorder have very complex medical needs that are not currently being addressed. Chronic drug users utilize 30% more emergency healthcare services than the general population¹¹ and are at higher risk for hospitalization,⁹ but due to fears of withdrawal and stigmatization, these patients frequently delay care and leave AMA far more often than the general population.^{7,12} This leads to increased costs for their care¹³ and increased morbidity and mortality after hospitalization.^{1,2,7}

What Can We Do? ⁵		
Screening and Referral to Treatment	Screening, Brief Intervention, and Referral to Treatment	Screening, Brief Intervention, MAD-ED, and Referral to Primary Care
<ul style="list-style-type: none"> • Screening • Handout with available treatment services • Telephone access 	<ul style="list-style-type: none"> • Screening • Motivational interview • Referral with extensive support 	<ul style="list-style-type: none"> • Screening • Motivational interview • Buprenorphine induction in the ED • Take-home Buprenorphine • PCP follow up within 72 hrs

Data to support

When compared to Screening and Referral (with or without Brief Interventions), initiating medication assisted treatment in the emergency department was significantly more effective in:

- Decreasing illicit opioid use^{5,6}
- Decreasing inpatient hospital services⁵
- Decreasing rates of leaving AMA⁴
- Increasing retention in addiction treatment services^{5,6}
- Improving management co-morbid psychiatric and medical conditions¹²

What should we do?

Establish a Medication Assisted Detox in the Emergency Department (MAD-ED) in Chicago's safety-net hospitals

Pathways to Establish MAD-ED¹⁰

Basic Model

- Prescribing ED physician with DEA X waiver
 - Available on-call
 - Provide support/prescriptions for induction therapy and supportive meds
- Program champion
- Collaborating in-house Pharmacy
- Sublingual Buprenorphine
- Referral to outside addiction treatment sites
- Providers willing to accept referrals from ED

Initiate and Refer

- All of the above
- Organized program
 - Patient recruitment and selection
 - Motivational counseling
 - Buprenorphine induction at ED or at home
 - Outpatient follow-up within 72hrs
- Structural components
 - Formal institutional buy-in
 - Departmental policies
 - Formalized handoffs to outpatient providers

Coordination of Addiction Services

- All of the above
- Most or all ED physicians have DEA X waivers
- Global buy-in from nursing
- Global buy-in from social services
- Dedicated addiction counselors in ED
- ED accepts referrals for MAD-ED
- Interdisciplinary committee for addiction treatment
- Dialogue with regional harms reduction efforts
